SUMMARY

AI-focused software engineer building production-grade GenAI and voice AI applications using LangGraph, RAG pipelines, FastAPI, and React Native. Experienced in architecting low-latency AI systems with LLMs, semantic retrieval, and agentic workflows for real-world products.

EXPERIENCE

- **The Famous Halwai Private Limited**

March 2026 – May 2026

Android Developer

Remote

- Optimized React Native assets and JS bundling configurations, reducing initial app load time by 25%
 - Integrated Firebase Cloud Messaging (FCM) and Firestore databases for reliable real-time notification sync
 - Designed local state caching using Firestore offline persistence to handle intermittent network dropouts
 - Created reusable UI component libraries and modular services in TypeScript, accelerating feature development
- **Lakshmi Information Technology Private Limited**

October 2025 – January 2026

Full Stack & App Developer Intern

Remote

- Built full-stack React Native features, optimizing backend REST API payloads to reduce server latency by 30%
 - Implemented UI components across React web and React Native mobile apps using shared style systems
 - Debugged runtime memory leaks and rendering bottlenecks, reducing production Android app crash rates by 15%
 - Configured automated Google Play Store deployment pipelines and optimized release app bundle generation

PROJECTS

- **Quant Agent – AI-Powered Equity Research Agent [GitHub] [Live]**

LangGraph, Groq (Ollama-GLM-5), Qdrant, Polygon.io API, RAG, FastAPI

- Built an agentic AI pipeline combining live financial data and 10-K RAG, reducing research time by 70%
 - Architected a LangGraph agent workflow with conditional routing logic to automate multi-step risk analysis
 - Implemented semantic search on dense 10-K filings using Qdrant vector database and embeddings
 - Integrated Polygon.io APIs and Ollama-GLM-5 model to stream structured financial insights with sub-second latency
- **AI Recipe Assistant – Voice-First Cooking Companion [GitHub]**

React Native, Expo, JavaScript, Python FastAPI, Groq (Llama-3), Whisper, RecipeDB API, FlavorDB API

- Developed voice activation in React Native (Expo) utilizing the **expo-av** library for hands-free recording
 - Integrated Foodoscope APIs to map ingredient alternatives using molecular flavor-pairing datasets
 - Deployed Whisper STT and Llama-3 models via Groq API, achieving sub-500ms voice conversational latency
 - Built custom localization logic for multilingual English/Hindi user queries and dietary preference filters

TECHNICAL SKILLS AND INTERESTS

Languages: Python, SQL, JavaScript, C/C++
AI & GenAI: Llama-3 (Groq), Whisper STT, RAG Pipelines, Prompt Engineering, NLP, Agentic Workflows
AI Frameworks: LangGraph, LangChain, Sentence-Transformers, Qdrant, FastAPI
Development: Node.js, Express.js, React Native, Expo, REST API Integration, Next.js
Tools & Platforms: Git, GitHub, Docker, Postman, VS Code, Firebase, Supabase
Areas of Interest: Applied GenAI, Voice AI, AI Agents, and AI-Powered Product Development

HACKATHONS & ACHIEVEMENTS

- **Code Veda 2025 (Microsoft):** Certificate of Appreciation for organizing the national event [Certificate]

2025
- **8X National Level Hackathon Finalist:** Selected 8 times in nationwide hackathons as finalist

2025 – 2026
- **Social Summer of Code Season 5:** Mentor, guided open-source contributors and reviewed pull requests

2026

EDUCATION

Dr. Akhilesh Das Gupta Institute of Professional Studies
Bachelor of Technology in Computer Science and Engineering, CGPA: 8.54/10
Delhi, India
